

A¹
(Cont'd)
a sedimentation-state acquiring unit that can acquire the information about sedimentation-state of the liquid in the liquid chamber from the storage unit,
wherein

the information about sedimentation-state of the liquid in the liquid chamber is
information about a point of time that is a standard for judgement of the sedimentation-state.

38. (ONCE AMENDED) A liquid jetting apparatus according to claim 17, wherein:
the liquid container further has a second liquid chamber that contains second liquid, the second liquid including a sinkable constituent,

A²
the storage unit also stores information about sedimentation-state of the second liquid in the second liquid chamber,

the head member further has a second nozzle,

the apparatus further comprises a second liquid way that can communicate with the second liquid chamber of the liquid container set at the container-setting portion and the second nozzle,

the sedimentation-state acquiring unit can also acquire the information about sedimentation-state of the second liquid in the second liquid chamber from the storage unit, and

the information about the respective sedimentation-states of the liquid and the second liquid in the liquid chamber and the second liquid chamber is information about a point of time that is a standard for judgement of the sedimentation-states.
